# DEPARTMENT OF MECHANICAL ENGINEERING

### **M.TECH. (MANUFACTURING ENGINEERING)**

#### SARDAR VALLABHBHAI NATIONAL INSTITUTE OF TECHNOLOGY Ichchhanath, Surat-395007, Gujarat, India www.svnit.ac.in

#### **MISSION & VISION STATEMENT OF INSTITUTE**

#### Vision Statement

To be one of the leading technical institutes disseminating globally acceptable education, effective industrial training and relevant research output

#### **Mission Statement**

To be a globally accepted centre of excellence in technical education catalysing absorption, innovation, diffusion and transfer of high technologies resulting in enhanced quality for all stakeholders

#### **MISSION & VISION STATEMENT OF THE DEPARTMENT**

#### Vision Statement

Department of Mechanical Engineering, Sardar Vallabhbhai National Institute of Technology, Surat perceives to be globally accepted centre of quality technical education based on innovation and academic excellence.

#### **Mission Statement**

Department of Mechanical Engineering, Sardar Vallabhbhai National Institute of Technology, Surat strives to disseminate technical knowledge to its under graduate students, post graduate students and research scholars to meet intellectual, ethical and career challenges for sustainable growth of humanity, nation and global community.

#### PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

The Program of M. Tech. (Manufacturing Engineering) will produce graduates who will be able to:

| PEO1 |   |
|------|---|
|      | processes and systems using appropriate methods and tools   |
| PEO2 | Apply manufacturing engineering education to address technical and societal problems with           |
|      | creativity, imagination, confidence and ethics  |
|      |   |
| PEO3 | Utilize communication skills in oral, written, visual and graphic modes within interpersonal, team, |
|      | and group environments.   |
|      |   |
| PEO4 | Retain intellectual curiosity for lifelong learning and flexible response to the rapidly evolving   |
|      | manufacturing challenges of the 21st century  |
|      |   |

#### **Program Articulation Matrix**

| Department Mission  |      | Mapping | of PEO |      |
|---|------|---------|--------|------|
| Department of Mechanical Engineering, Sardar Vallabhbhai National         | PEO1 | PEO2    | PEO3   | PEO4 |
| Institute of Technology, Surat strives to disseminate technical           |      |         |        |      |
| knowledge to its under graduate students, post graduate students and      | 2    | 2       | 1      | 1    |
| research scholars to meet intellectual, ethical and career challenges for | 3    | 5       | 1      | 1    |
| sustainable growth of humanity, nation and global community.              |      |         |        |      |

#### PROGRAM OUTCOMES (POs)

#### Proposed Program Outcomes (POs):

The graduates of M. Tech. (Manufacturing Engineering) will demonstrate an ability to:

| PO1  | Carry out independent research /investigation and development work to solve practical problems         |
|------|--|
| PO2  | Write and express a substantial technical report/document  |
| PO3  | Demonstrate a degree of mastery over the area as per the specialization of the program. The mastery    |
|      | should be at a level higher than the requirements in the appropriate bachelor program                  |
| PSO1 | Design, analyse and develop parts using manufacturing process(es) and system(s) for innovative         |
|      | research and industrial application by following quality and safety standards.                         |
| PSO2 | Impart solution(s) to industrial and societal problems for economic and sustainable benefits with high |
|      | moral and professional ethics  |

#### **COURSE STRUCTURE FOR**

### M. TECH. (MANUFACTURING ENGINEERING)

#### **SEMESTER – I**

|         |             |   |   |   |    |        | Exam  | Scheme |         |

| MEMF101 | : | ADVANCED MACHINING PROCESSES | L | Т | Р | Credits |
|---------|---|------------------------------|---|---|---|---------|
|         |   |                              | 3 | 0 | 2 | 04      |

At the end of the course the students will be able to:

| CO1 | Explain the need, classification, working and applications of advanced   |
|-----|--|
|     | machning processes   |
| CO2 | Derive model for MRR and deduce relationship with various process parameters   |
| CO3 | Explain and select finishing processes and express relationship between process  |
|     | parameters and responses   |
| CO4 | Describe the need and working of a micro machining process and distinguish it  |
|     | from macro machining processes   |
| CO5 | Examine the possibility of combining different process to develop hybrid   |
|     | processes for more efficient Machining process   |
| CO6 | Analyse the requirement of machining/finishing according to shape, material and size of product and select the best process among various alternatives |

| Introduction: Advanced Machining Processes & Mechanical Energy<br>Based Processes   | (08 Hours)  |
|---|---|
| Evolution, need, and classification of advanced machining processes. Me<br>Based Processes: USM, AJM, WJM, AWJM processes – Working Princ<br>Material removal rate, Process and performance parameters, Application<br>characteristics; Limitations   | chanical Energy<br>iple, equipment,<br>ons, Operational   |
| Thermal and Electrical Energy Based Processes   | (08 Hours)  |
| EDM, Working Principle, equipment details, Wire Electro-Discharge Macle<br>electrode / Tool – Power and control Circuits-Tool Wear -Dielectric – Fl<br>removal rate, Process, and performance parameters such as Surf<br>accuracy, Applications. LBM, EBM, IBM, PAM processes – Working Prince<br>Material removal rate, Process and performance parameters, Applic<br>Capabilities, Limitations. | hining (WEDM),<br>lushing, Material<br>face finish and<br>ciple, equipment,<br>cations, Process |
| Chemical and Electro Chemical Energy based Processes  | (06 Hours)  |
| Working principle and details of Chemical Machining (CHM), Photo-Chemical Machining ECM), and Electro Chemical Machining ECM) - Working Principle, equipment removal rate, Process and performance parameters, Applications, Tool Design  | mical Machining<br>ipment, Material   |
| Advanced Finishing Processes  | (07 Hours)  |
| Abrasive Flow Machining (AFM), Magnetic Abrasive Finishing (MRAF) - Principle of working, equipment, I rate, Process and performance parameters, Applications, Limitations.   | MAF), Magneto<br>Material removal   |
| Micro Machining Processes   | (08 Hours)  |

Miniaturization, scaling laws, Principle and working of micro turning, micro milling, micro EDM, micro USM, Laser micro machining, diamond turn machining

**Hybrid Machining Processes** 

(08 Hours)

(Total Lecture Hours: 45)

Need, Classification: Assisted Hybrid Machining Processes, Laser Assisted Machining, Vibration Assisted Machining, Electro Stream Drilling (ESD), Electrochemical Deburring (ECDe), Electro Chemical Discharge Machining (ECDM)- Working Principle, equipment description, Material removal rate, Process and performance parameters, Applications

#### 3. Books Recommended:

| 1 | Jain, V.K., Advanced Machining Processes. Allied publishers, 1st Edition, 2009                     |
|---|--|
| 2 | Pandey, P.C. and Shan, H.S., Modern machining processes. Tata McGraw-Hill Education, 2003          |
| 3 | Mishra P. K., Nonconventional machining, Narosa publishing house, 2011                             |
| 4 | Jain V. K., Introduction to micro machining, Narosa publishing house, New Delhi, 1st Edition, 2010 |
| 5 | Ghosh A. & Malik A. K., Manufacturing Science, Affiliated East–West press Pvt. Ltd., 2002          |

#### List of Practicals:

- 1 To study the effect of process parameters on MRR and TWR during EDM process
- 2 To study the effect of welding parameters during ultrasonic welding of similar/dissimilar metals
- 3 To study single pass and multi pass wire EDM process to cut complex geometries
- 4 To study the kerf and surface finish during abrasive water jet machining process
- 5 To study the micro milling of metal/ non-metal part
- 6 To study the micro turning of Brass rod
- 7 To study the micro EDM process using different micro electrodes
- 8 To study the effectiveness of hybrid ECDM process
- 9 To study the EDM process improvement using tool actuation
- 10 To study and demonstrate laser engraving process

| MEMF103 | : | SHEET METAL FORMING | L | Т | Р | Credits |
|---------|---|---------------------|---|---|---|---------|
|         |   |                     | 3 | 1 | 2 | 05      |

At the end of the course the students will be able to:

| CO1 | Explain the sheet deformation processes and recognize load instability and tearing in |
|-----|---|
|     | sheet metal forming.  |
| CO2 | Apply the theory of plasticity and its application for analysing given sheet metal    |
|     | forming processes   |
| CO3 | Compute the stresses and forces during stamping and deep drawing process              |
| CO4 | Evaluate the punching forces using principles of punching and blanking process        |
| CO5 | Analyse principles, capabilities and applications of bending process and sheet hydro  |
|     | forming   |
| CO6 | Select suitable sheet metal forming process for given application                     |

| Fundamentals of Metal Forming   | (04 Hours)         |  |  |  |  |  |
|---|--------------------|--|--|--|--|--|
| Advantages of Metal Forming, cold and hot forming, various metal forming processes,<br>Tensile Test - load–extension diagram, engineering stress–strain curve, true stress–strain<br>curve, Anisotropy, Rate sensitivity, Effect of properties on forming   |                    |  |  |  |  |  |
| Sheet Deformation Processes (Plane Stress)  | (10 Hours)         |  |  |  |  |  |
| Deformation in uniaxial tension, stress and strain ratios, theory of yielding in plain<br>condition - Maximum shear stress, Hydrostatic stress, Tresca yield condition, Von I<br>yield condition, Levy–Mises flow rule, Relation between the stress and strain ratios, Wo<br>plastic deformation, Work hardening hypothesis, Effective stress and strain func<br>Concept of Formability, formability limits and formability diagram. Factors affectin<br>forming limit curve. |                    |  |  |  |  |  |
| Load Instability and Tearing (09  |                    |  |  |  |  |  |
| Uniaxial tension of a perfect strip, Tension of an imperfect strip, Tensile instability in stretching continuous sheet - condition for local necking in uniaxial and biaxial tension.   |                    |  |  |  |  |  |
| Analysis of Stamping and Deep Drawing Process   | (06 Hours)         |  |  |  |  |  |
| Two-dimensional model of stamping, stretch and draw ratios in a stamping, three-<br>dimensional stamping model, Limiting drawing ratio and anisotropy, effect of strain-<br>hardening and friction on drawing stress, redrawing and reverse redrawing of a cylindrical<br>cup, wall ironing of deep- drawn cups, estimation of drawing force  |                    |  |  |  |  |  |
| Analysis of Punching and Blanking Process   | (04 Hours)         |  |  |  |  |  |
| Mode of metal deformation and failure, deformation model and determination of working force   | fracture analysis, |  |  |  |  |  |

| Analysis of Bending Process   | (06 Hours)  |
|---|---|
| Strain distribution in bending, bending without tension, bending of sheet a<br>different material behaviour like elastic perfect plastic sheet, strain hardenin<br>determination of work load, stock length and punch angle, springback as<br>bending line construction | in v-die, bending of<br>ng plastic sheet, etc.<br>nd reverse bending, |
| Analysis of Shoot Hydroforming  | (06Hours)   |

#### Analysis of Sheet Hydroforming

(06Hours)

(Total Lecture Hours: 45)

Free expansion of a cylinder by internal pressure, Forming a cylinder to a square section, Tube forming in a frictionless die, Tube forming with sticking friction (or very high friction), Constant thickness forming, Sequential hydroforming

#### 3. **Books Recommended:**

# Hill R., "The Mathematical Theory of Plasticity", Oxford University Press, 2004 Hu S.J., Marciniak Z. and Duncan J.L., "Mechanics of Sheet Metal Forming", Butterworth- Heinemann, 2002 Timoshenko S. P., "Theory of Elasticity", McGraw Hill Education, 2017 Ghosh A. and Malik A., "Manufacturing Science", East-West Press Pvt Ltd., 2010. Dally J. W. and Riley W. F., "Experimental Stress Analysis", McGraw-Hill Education, 1991

#### **List of Practicals:**

- 1. To Perform tensile test on different metal samples and plot the load-extension diagram
- 2. To Study the rate sensitivity of different metals by varying the strain rates during deformation.
- 3. To Study the temperature sensitivity of different metals by varying the temperature during deformation
- 4. Experiment with various metals to determine yielding using the Tresca and Von Mises yield criteria.
- 5. To Conduct formability tests on sheet metals
- 6. To Study local necking conditions in uniaxial and biaxial tension.
- 7. To Perform deep drawing experiments and measure the limiting drawing ratio and drawing force.
- 8. To Conduct punching and blanking experiments to observe deformation modes and failure mechanisms
- 9. To Perform bending tests on sheets using a V-die.
- 10. Experiment with free expansion of a cylindrical tube using internal pressure.

| MEMF105 | EMF105 : OPERATIONS PLANNING AND | L | Τ | Р | Credits |    |
|---------|----------------------------------|---|---|---|---------|----|
|         |                                  |   | 3 | 1 | 0       | 04 |

At the end of the course the students will be able to:

| CO1 | Identify the elements of operations management and various transformation processes to enhance productivity and competitiveness  |
|-----|--|
| CO2 | Analyse and evaluate various facility alternatives and their capacity decisions,<br>develop a balanced line of production & scheduling techniques in operation<br>environments |
| CO3 | Plan suitable materials handling principles and Supply Chain practices in the operations.  |
| CO4 | Compute the inventory based on selected model for selected case  |
| CO5 | Develop aggregate MRP and ERP in operation environments.   |
| CO6 | Integrate Operation planning with supply chain for overall productivity rise   |

| Operations Planning & Control   | (04 Hours)         |  |  |  |  |  |
|---|--------------------|--|--|--|--|--|
| Operations and Productivity, Operation strategy in a Global Environment   |                    |  |  |  |  |  |
| Forecasting   | (04 Hours)         |  |  |  |  |  |
| Elements and steps in forecasting, Types of forecasting, Demand forecasting using qualitative and quantitative methods, Errors in forecasting   |                    |  |  |  |  |  |
| Capacity Planning and Constraint Management   | (04 Hours)         |  |  |  |  |  |
| Process Strategies, Definition and Measurement of capacity, Adjusting capacity, Quantitative methods for capacity planning decision   |                    |  |  |  |  |  |
| Layout and Location Strategy  | (05 Hours)         |  |  |  |  |  |
| Types of layout, Design of Layout, Factors affecting location decision, M for facility location and layout  | Aathematical model |  |  |  |  |  |
| Supply Chain  | (05 Hours)         |  |  |  |  |  |
| The Supply Chain's Strategic Importance Sourcing Strategies, Supply Chain Risk Managing<br>the Integrated Supply Chain Building the Supply Base, Supplier Evaluation, Supplier<br>Development                                   |                    |  |  |  |  |  |
| Inventory Control and Management  | (06 Hours)         |  |  |  |  |  |
| Introduction, EOQ Models with and without shortage, Multi item Deterministic Model,<br>Dynamic and Fluctuating Models, Deterministic Model with price breaks and Probabilistic<br>inventory models, Selective Inventory control |                    |  |  |  |  |  |
| Aggregate Planning  | (05 Hours)         |  |  |  |  |  |
| Purpose, inputs of aggregate planning processes and strategies, Methods for aggregate   |                    |  |  |  |  |  |

| Aggregate planning in Services         |            |
|--|------------|
| Materials Requirement Planning and ERP | (06 Hours) |
|  |            |

Just in Time, MRP input and output, MRP structure, MRP management, Lot sizing Technique and Extension of MRP, JIT and MRP in services, JIT to Die exchange, ERP : Introduction, Implementation, Advantages

Short Term Scheduling

(06 Hours)

Introduction to Scheduling and Shop floor planning and control, order sequencing rules and their performance based on different evaluation criteria, changeover costs and job sequence, mathematical models of job sequencing

#### 3. Books Recommended:

#### (Total Lecture Hours: 45)

| 1 | Jay Heizer, Barry Render and Chuck Munson, Amit Sachan, Operations Management,<br>Pearson Education, 2017                              |
|---|--|
| 2 | Everett E. Adam, Ronald J. Ebert, Production and Operation Management, 5 <sup>th</sup> edition, Prentice Hall of India, New Delhi,2012 |
| 3 | S. N. Chary, Production & Operations Management, 6 <sup>th</sup> Edition, McGraw Hill, 2019  |
| 4 | R. Paneerselvam, Production & Operations Management, 3 <sup>rd</sup> edition, Prentice Hall of India, New Delhi,2012                   |

| MEMF111 | : | ADVANCED WELDING TECHNOLOGY | L | Τ | Р | Credits |
|---------|---|-----------------------------|---|---|---|---------|
|         |   |                             | 3 | 0 | 0 | 03      |

At the end of the course the students will be able to:

| CO1 | Relate the significance of welding in various industrial sectors.                                      |
|-----|--|
| CO2 | Explain the characteristics of welding arc and relate it importance during welding process             |
| CO3 | Develop the concepts of various advanced welding technologies  |
| CO4 | Analyse the heat flow and metal transfer mechanism in welding  |
| CO5 | Determine the solidification mechanism of weld pool  |
| CO6 | Compile the quality of weldments by monitoring and controlling the process through advanced techniques |

#### 2. Syllabus:

| Introduction  | (06 Hours)                              |  |  |
|---|---|--|--|
| Welding as compared with other fabrication processes, classification, configuration, ASME standards for weldments, scope and applications of industrial sectors | weldability, weld<br>welding in various |  |  |
| Physics of Welding Arc  | (08 Hours)                              |  |  |

Structure and characteristics of welding arc, methods of arc initiation and maintenance, arc stability, voltage distribution along the arc, cathode and anode drops, arc column, thermionic and non thermionic cathode, theories of cathode and anode mechanisms, temperature distribution in the arc, arc efficiency, heat generation at cathode and anode, effect of shielding gas on arc, isotherms of arcs, arc blow, arc welding power sources, heat sources for solid state welding.

| Advanced Welding Processes   | (12 Hours)            |
|--|-----------------------|
| Overview of arc welding processes, flux cored arc welding, plasma trans    | sferred arc welding,  |
| electro-gas and electro-slag welding, resistance welding, magnetic pulse w | velding. Theory and   |
| mechanism of solid state welding, technique and scope of - friction v      | velding, fiction stir |
| welding, diffusion welding, cold pressure welding, ultrasonic weldi        | ng, electron beam     |
| welding, laser beam welding. Cladding through welding, automation in we    | elding                |
| Heat Flow and Metal Transfer in Welding                                    | ( <b>08 Hours</b> )   |

| Calculation of peak temperature, width of heat affected zone, cooling rate  | and solidification |
|---|--------------------|
| rates, weld thermal cycles. Forces, mechanism and types of metal t          | ransfer in various |
| arc welding processes, factors controlling melting rate in various w        | velding processes. |
| Residual stresses and their measurement, weld distortion and its prevention |                    |
| Solidification of weld pool   | (05 Hours)         |

Principle of solidification of weld metal, modes of solidification, effect of welding parameters on weld structure, grain refinement principle of weld metal, method of weld metal refinement: inoculation, arc pulsation, external excitation

**Inspection and Quality Control of Weldments** 

(06 Hours)

(Total Lecture Hours: 45)

Overview of post weld characterization, weld related discontinuities, overview of standard destructive and nondestructive testing applicable for weldments, inspection of weldments, importance of welding procedure and performance qualification, monitoring and control of welding processes, welding simulation.

| 1 | Houdlecroft P.T., "Welding Process Technology", Cambridge University Press, 3rd edition, 2004                                     |
|---|---|
| 2 | Bowditch, W.A., Bowditch, K. E., "Welding Technology Fundamentals", Goodheart-<br>Willcox Co. Pub., 4 <sup>th</sup> edition, 2009 |
| 3 | Jeffus, L., "Welding: Principles and Applications", Cengage Learning Pub., 2016   |
| 4 | Lancaster J F., "Metallurgy of Welding", Elsevier, 6th edition, 1999  |
| 5 | Parmar R. S., "Welding Engineering and Technology", Khanna Publishers, 2 <sup>nd</sup> edition, 2013                              |

| MEMF113 | : | COMPUTER AIDED PRODUCTION<br>PLANNING | L | T | Р | Credits |
|---------|---|---------------------------------------|---|---|---|---------|
|         |   |                                       | 3 | 0 | 0 | 03      |

At the end of the course the students will be able to:

| CO1 | Explain different methods of computer aided process planning (CAPP) and                |
|-----|--|
|     | distinguish between process planning and production planning.                          |
| CO2 | Determine the forecast of a product for the given historical data using forecasting    |
|     | models   |
| CO3 | Solve the facility layout problems using different algorithms and create part families |
|     | and machine cells in a manufacturing facility using group technology approach          |
| CO4 | Prepare material requirement plan for a product and explain enterprise resource        |
|     | planning (ERP)   |
| CO5 | Create schedules for multiple machines/workstations and describe the capacity          |
|     | planning   |
| CO6 | Explain different computer aided measurement and inspection techniques                 |

| Introduction   | (05 hours)  |
|--|---|
| Production systems and their types -mass production, batch produc<br>production systems. Introduction to process planning in manufacturin<br>planning. Computer aided process planning (CAPP) - variant and gene<br>planning   | tion and job shop<br>g, Role of process<br>erative type process   |
| Computer Aided Forecasting   | (06 hours)  |
| Introduction to forecasting, sources of data, demand patterns, forecasting models – Quantitative: moving average, linear regression and experimethods; Qualitative - Delphi method   | g errors, forecasting<br>onential smoothing   |
| Facility Layout Planning   | (10 hours)  |
| Introduction to facility layout, objectives, types of facility layout- line lay<br>cellular layout and fixed position layout, advantages and disadvantage<br>balancing, line balancing algorithms- largest candidate rule, Kilbridge a<br>and ranked positional weights method. Heuristics of process layout probl<br>relative allocation of facility technique, automated layout design program<br>relationship layout planning. Multi objective approach for facility layout p | Yout, process layout,<br>es. Assembly line<br>and Wester method,<br>ems - computerized<br>n and computerized<br>lanning |
| Group Technology   | (06 hours)  |
| Introduction, benefits of group technology, part families, part classific<br>applications of GT. Algorithms and models for Group Technology - Rat<br>algorithm and Bond energy algorithm   | cation and coding,<br>nk order clustering   |

| Material Requirement Planning  | (06 hours)          |  |
|--|---------------------|--|
| Introduction, Objective of the MRP system, inputs to the MRP System – product structure or bill of materials (BOM), master production schedule (MPS) and inventory status file. MRP calculations. Manufacturing resources planning (MRP-II). Enterprise resource planning (ERP)  |                     |  |
| Scheduling And Capacity Planning   | ( <b>07 hours</b> ) |  |
| Introduction, Single machine scheduling –shortest processing time rule, weighted mean flow time rule, earliest due date rule, model to minimize total tardiness, branch and bound algorithm. Introduction to parallel processors under single machine scheduling. Flow shop scheduling – Johnson's algorithm. Job shop scheduling. Capacity planning – measure of capacity, capacity strategies, tools for capacity planning |                     |  |
| Computer Aided Measurement and Inspection  | (05 hours)          |  |
| Computer Aided Testing, Contact and Non-contact type inspection, Co-   | ordinate measuring  |  |

Computer Aided Testing, Contact and Non-contact type inspection, Co-ordinate measuring machines (CMM), types of CMM, Applications of CMM and its Benefits, Laser viewers for production profile checks, Machine vision technology, Microprocessors in metrology

#### (Total Lecture Hours: 45)

| 1 | R. Panneerselvam. Production and Operations Management, 3 <sup>rd</sup> Edition, PHI Learning<br>Pvt Ltd, 2015                     |

|                |   |                       | 3 | 0 | 0 | 03      |

At the end of the course the students will be able to:

| CO1 | Understand and describe geometric transformation techniques in CAD.                       |
|-----|---|
| CO2 | Design surface models for given engineering applications.                                 |
| CO3 | Develop mathematical equation to represent curves   |
| CO4 | Create model of a given engineering component using solid modeling techniques             |
| CO5 | Design and analyse a given engineering component or assembly                              |
| CO6 | Describe and create interfacing design and drafting for an application with CAD standards |

### 2. <u>Syllabus:</u>

| Introduction   | (05 Hours)           |  |  |  |  |  |
|--|----------------------|--|--|--|--|--|
| Basics of Computer Aided Design, Introduction to Computer graphics, DDA and  |                      |  |  |  |  |  |
| Bresenham's algorithm for generating various figures and Basics of CAD hardwares.  |                      |  |  |  |  |  |
| 2D/3D Transformation   | (06 Hours)           |  |  |  |  |  |
| 2D Transformation of geometries and 3D Transformations for Tra   | inslation, Rotation, |  |  |  |  |  |
| Scaling, Symmetry, Reflection, and Homogeneous Transformati  | ons, Orthographic    |  |  |  |  |  |
| Projections, Axonometric Projections, Oblique Projections, Perspective   |                      |  |  |  |  |  |
| Representation of Curves   | (06 Hours)           |  |  |  |  |  |
| Representation of curves – Explicit and Implicit Equations Par<br>parametric Curves, Splines, Bezier, B-Splines and generation of surfaces   | ametric and non-     |  |  |  |  |  |
| Solid Modeling   | (08 Hours)           |  |  |  |  |  |
| Introduction to Drafting and modelling of solids, Coordinate system, Fundamentals of solid modeling, Customization, 3D sketches, Datum features, Modeling operation Strategyand creating features, Geometric constraints, Modeling aids & tools, Generalized, views, Presentation of dimensioning / tolerances/symbols & annotation, Associatively, Parent child relationship, Parametric design, Programming techniques in drafting/ modeling/analysis, Concept of computer animation, Properties calculation Hidden line and curfoce removal |                      |  |  |  |  |  |
| Surface Design & Analysis  | (08 Hours)           |  |  |  |  |  |
| Different approaches of creating and assembly. Surface design, and Surfa   | ce analysis          |  |  |  |  |  |
| CAD Standards  | (04 Hours)           |  |  |  |  |  |
| Standards in CAD, Graphics and computing standards, Data exchange s  | tandards, Exchange   |  |  |  |  |  |
| format, Design database, Interfacing design and drafting, Mechanical assembly.   |                      |  |  |  |  |  |
| Applications of CAD in Manufacturing   | (08 Hours)           |  |  |  |  |  |
| Introduction to CAD tools and softwares, Role and applications of CA   | D in manufacturing   |  |  |  |  |  |
| domains like machining, forming, tool design, die design, assembly, 3D   | printing, etc.       |  |  |  |  |  |
|  |                      |  |  |  |  |  |

|         |    |                          | 3 | 0 | 0 | 03      |

At the end of the course the students will be able to:

| CO1 | Explain the mechanism of solidification of metals and alloys                      |
|-----|---|
| CO2 | Explain and distinguish various deformation mechanisms under different            |
|     | conditions  |
| CO3 | Determine heat treatment required for given conditions                            |
| CO4 | Identify the equilibrium condition under different phase transformation using TTT |
|     | or CCT diagram  |
| CO5 | Perform mechanical testing of given part  |
| CO6 | Understand metallurgical aspects of manufacturing processes                       |

| Liquid Metallurgy Processing  | (10 Hours)   |  |  |  |  |
|---|--|--|--|--|--|
| Introduction, Nucleation in pure metals, undercooling, recalescence, homogeneous nucleation, heterogeneous nucleation, growth and interface stability, cooling curve and solidification structures of pure metal, single crystals, equiaxed microstructures, cooling curve and solidification structures of solid solutions, Constitutional Undercooling, Solute redistribution during solidification, Cellular Structures, dendritic structures, segregation during cooling, eutectic phase solidification, off-eutectic alloys, peritectic alloys, solidification of ingot and casting, gas solubility and gas porosity, solidification during quenching from the melt (metal glasses). |  |  |  |  |  |
| Plastic Deformation of Metals   | (10 Hours)   |  |  |  |  |
| Metallic crystal structure, SC, FCC, BCC, HCP, miller indices, single cry<br>Segregation of Impurities Line and Points Defects in Crystals Elasticity<br>plasticity; defects in crystals; elements of dislocation theory – types of di<br>twinning, source and multiplication of dislocations, stress fields around<br>dislocations, dislocation interactions and reactions; strengthening me<br>fatigue and creep behaviour; superplasticity; fracture – Griffith theory<br>linear elastic and elastoplastic fracture mechanics, ductile to brittle<br>toughness.  | ystal vs polycrystal,<br>y, yield criteria, and<br>islocations, slip and<br>dislocations, partial<br>echanisms; tensile,<br>y, basic concepts of<br>transition, fracture |  |  |  |  |
| Solid State Phase Transformation  | (08 Hours)   |  |  |  |  |
| Phase equilibria involving eutectoid and peritectoid transformations, TTT and CCT diagrams, hardenability, Heat Treatment of Ferrous and Non Ferrous Alloys viz., annealing, normalizing, quenching, tempering and precipitation hardening.   |  |  |  |  |  |
| Fundamental Mechanical Properties(08 Hours)   |  |  |  |  |  |
| Tensile Strength, Hardness Tests Impact Tests, creep, fatigue, fracture toughness and formability Other Destructive Tests, Non-destructive Tests.   |  |  |  |  |  |
| The Industrial Shaping of Metals  | (09 Hours)   |  |  |  |  |
| Sand Casting, Die Casting and Allied Processes, Fusion and Nor  | n Fusion Welding   |  |  |  |  |

Processes, Hot-working Processes, Cold-working Processes, Sintering from a Powder, Machinability of Metals and Alloys

At the end of the course the students will be able to:

| CO1 | Suggest suitable techniques to minimize measurement errors and uncertainty        |
|-----|---|
| CO2 | Identify suitable methods and devices for dimensional metrology of given part     |
| CO3 | Calculate limits, fits and tolerances and design limit gauges for given condition |
| CO4 | Assess surface roughness and form errors for given surface                        |
| CO5 | Identify devices for computer aided inspection of given form and part             |
| CO6 | Deduce requirement of laser metrology for given application                       |

#### 2. <u>Syllabus:</u>

| Basic Concepts of Measurement  | (03 Hours)   |  |  |  |
|--|--|--|--|--|
| Generalized measurement system, Classification of measurements, measurement, Calibration, Measuring instruments and their properties.  | Classification of  |  |  |  |
| Uncertainty Analysis   | (03 Hours)   |  |  |  |
| Measurement and error, Type A and Type B categories of uncertainty, and type B, Evaluation of uncertainty.   | Combined type A  |  |  |  |
| Measurement of Length and Angle  | (05 Hours)   |  |  |  |
| Length measurement, Angle measurements, Direct and indirect meth length measurement, Length measuring instruments, Angle measuring i errors with sine-bar, Measurement of angles over 45 <sup>0</sup> , Internal taper measurement of angles over 45 <sup>0</sup> , Internal taper measurement of angles over 45 <sup>0</sup> , Internal taper measurement of angles over 45 <sup>0</sup> , Internal taper measurement of angles over 45 <sup>0</sup> , Internal taper measurement of angles over 45 <sup>0</sup> , Internal taper measurement of angles over 45 <sup>0</sup> , Internal taper measurement of angles over 45 <sup>0</sup> , Internal taper measurement of angles over 45 <sup>0</sup> , Internal taper measurement of angles over 45 <sup>0</sup> , Internal taper measurement of angles over 45 <sup>0</sup> , Internal taper measurement of angles over 45 <sup>0</sup> , Internal taper measurement of angles over 45 <sup>0</sup> , Internal taper measurement of angles over 45 <sup>0</sup> , Internal taper measurement of angles over 45 <sup>0</sup> , Internal taper measurement of angles over 45 <sup>0</sup> , Internal taper measurement of angles over 45 <sup>0</sup> , Internal taper measurement of angles over 45 <sup>0</sup> , Internal taper measurement of angles over 45 <sup>0</sup> , Internal taper measurement over 45 <sup>0</sup> , Internal taper 45 <sup>0</sup> , Internal ta | ods, Standards for<br>nstruments, Setting<br>asurements. |  |  |  |
| Limits, Fits and Tolerances  | (07 Hours)   |  |  |  |
| Need for limit systems, Interchangeability, types of interchangeability, Limits and fits,<br>Tolerance dimensions, Terns and definitions, Published standards for limits and fits system,<br>Types of fits, Design of limit gauges, Geometric tolerances key aspects, symbols, Tolerance<br>frame Datum symbols, Tolerance feature and Interpreting drawing  |  |  |  |  |
| Form Metrology   | (06 Hours)   |  |  |  |
| Measurement of roughness, waviness, flatness, roundness, cylindricity, radius, screw, gear,<br>Methods of improving accuracy & surface finish, Influence of forced vibration on accuracy,<br>Dimensional wear of cutting tools and its influences on accuracy.   |  |  |  |  |
| Amplifying Devices   | (04 Hours)   |  |  |  |
| Tool Maker's microscope, Profile projector, Comparators: Mecha optical, electric and electronic.   | nical, Pneumatic,  |  |  |  |
| Computer Aided Metrology   | (10 Hours)   |  |  |  |
| Coordinate measurement machine (CMM), Applications, Advantages, Type of CMM & applications, Constructional features of CMM, Probes touch trigger probe and non contact trigger probers, Operation and Programming, Examination of surface texture, Possible sources of error in CMM, Image Analysis and Computer Vision.   |  |  |  |  |

| LASER Metrology  | (07 Hours)   |
|--|--|
| Types of laser, Laser in engineering metrology, methods of laser<br>interferometer, Laser alignment telescope, Laser micrometer, On-lir<br>measurements of small diameter, large displacement, Roundness and<br>using LASER, Micro profile and topography measurements, Testing of n | metrology, Laser<br>ne and in-process<br>surface roughness<br>nachine tools. |

|---------|----|------------------|---|---|---|---------|
|         |    |                  | 3 | 0 | 0 | 03      |

At the end of the course the students will be able to:

| CO1 | Identify and illustrate sources of failures during manufacturing, services and        |
|-----|---|
|     | maintenance   |
| CO2 | Analyse the type of failures in the components by applying fracture mechanics         |
|     | principles  |
| CO3 | Suggest and explain different types of failure analysis tools for industrial solution |
| CO4 | Compute extent of failure using different industrial engineering tools                |
| CO5 | Identify suitable NDT techniques applied for failure analysis of industrial problem   |
| CO6 | Design and implement failure analysis strategies to diagnose failure indications,     |
|     | identify failure mechanisms, and determine reasons of failure in components           |

#### 2. Syllabus:

| Introduction  | (06 Hours)   |  |  |
|---|--|--|--|
| Need and scope of failure analysis and prevention, Engineer understanding failure, Fundamental sources of failures: Examples of designs.  | ing disasters and different deficient              |  |  |
| Fundamental Sources of Failures   | (07 Hours)   |  |  |
| Imperfections in base metals, Improper manufacturing processes and conditions, Poor assembly, Service and maintenance.  | Improper service                                   |  |  |
| Industrial Engineering Tools for Failure Analysis   | (12 Hours)   |  |  |
| Pareto diagram, Fish bone diagram, Fault tree analysis, Failure rate analysis, mean failure rate, mean time to failure, mean time between failure, Graphical representation of Fd,, Z and R. Generalization in graphical form, integral form, Hazard models, systems reliability, availability, maintenance, overall equipment effectiveness, Total Productive Maintenance (TPM). Failure Mode and Effect Analysis (FMEA)   |  |  |  |
| NDT & DT for Failure analysis:  | (06 Hours)   |  |  |
| Non-destructive testing for failure analysis, Destructive testing, selection cleaning & sectioning of samples, Macroscopy of fracture surfaces-<br>fracture surfaces- II, Determination of Type of Fractures and chemical and   | tion, preservation,<br>I, Macroscopic of<br>alysis |  |  |
| General Procedures for Failure Analysis and case studies  | (14 Hours)   |  |  |
| Types of Failure and Stress, Ductile and Brittle Fractures, Fatigue Failures, Wear Failures, Corrosion Failures, Elevated-Temperature Failures, use of fracture mechanics and fracture toughness principles in failure analysis and analysis findings and report/recommendation writing. Simulated test and analysis of evidences and results. Different case studies: Failure analysis of welded joints in different sectors, Failure analysis of 3D Printed polymer parts, Failure analysis of manufacture defects induced tubes, failure analysis of deep drawing dies in manufacturing of automotive parts and aerospace components |  |  |  |

At the end of the course the students will be able to:

| CO1 | Understand and demonstrate operation of identified machine/instrument/equipment |
|-----|---|
| CO2 | Perform given practical task independently on machine/instrument/equipment      |
| CO3 | Analyse and evaluate the observations of identified practical task              |
| CO4 | Represent results graphically and deduce conclusions therein                    |
| CO5 | Demonstrate practical skills to work on identified problem                      |
| CO6 | Demonstrate skills of team effort and coordination through group practical      |
|     | performance   |

#### **Practicals:**

Students will perform practicals in various laboratories. The indicative list (but not limited to) of practicals is as under:

- 1. To understand the effect of selected welding process parameters on weld bead geometry and welded joint characteristics.
- 2. To understand microstructural characterization techniques for as weld and post weld heat treated weldments.
- 3. To understand cladding approach through plasma transferred arc welding process
- 4. To understand the correlation of virtual/reality-based welding with actual welding.
- 5. Evaluation of the effect of process parameters on cutting force during given machining process
- 6. Estimation of chip reduction co-efficient and shear angle during orthogonal cutting
- 7. Preparation of single point cutting tool with a given tool geometry
- 8. Estimation of tool life of a single point cutting tool
- 9. Evaluation of dimensional and geometrical accuracy on a given part using CMM
- 10. Mechanical testing of a given part (machined part/welding part/ composite)

#### **List of Practicals:**

- 1. Demonstration of CNC Milling machine with user interface and calculate the Coordinates of given geometry in absolute and increment mode for cutter path.
- Introduction of G codes and M codes and write the CNC part programming for a given geometry using Linear, Circular interpolation. (Using FANUC Controller)
- Write the CNC part programming for a given geometry using Mirror and Subroutine. (Using FANUC Controller)
- 4. Write the CNC programming for a given geometry using Polar Co -ordinate for drilling cycles.
- Write the CNC part programming for a given geometry using Tool Radius
   Compensation and Repeat loop for Peck Drilling Cycle. (Using FANUC Controller)
- Introduction and programming of all canned cycle of Milling machine. (Using FANUC controller)
- 7. Demonstration and study of CNC Lathe machine with sample programming.
- Write CNC programming for given geometry (Lathe) using stock removal cycles (Using FANUC controller)
- 9. Demonstration of FMS setup. (AS / RS, AGV, CNC Lathe, CNC Milling, Robot & CMM setup
- Demonstration of Advance manufacturing Machines like EDM (Electro Discharge Machine), Micro Machine, Vision Measuring System.

#### List of practicals:

- 1 To study the STL file preparation of a given CAD model using selected software
- 2 To 3D print a given part using filament extrusion process
- 3 To 3D print a given part using photo polymerization process
- 4 To fabricate polymer filament and study its suitability for 3d printing
- 5 To study the effect of infill pattern and infill density on mechanical strength of a given 3D printed part
- 6 To prepare cellular structures using different additive manufacturing techniques
- 7 To fabricate fiber reinforced polymer composite part using composite 3D printing process
- 8 To study of the post-processing techniques for 3D printed components
- 9 To study clay 3D printing process
- 10 To prepare report on demonstration of laser based additive manufacturing process

| MEMF110 | : | METAL CASTING | L | Τ | Р | Credits |
|---------|---|---------------|---|---|---|---------|
|         |   |               | 3 | 0 | 0 | 03      |

At the end of the course the students will be able to:

| CO1 | Describe the fundamentals and steps involved in metal casting                 |
|-----|---|
| CO2 | Determine suitable strategy for melting and solidification of metal for sound |
|     | casting   |
| CO3 | Explain designing of gating and riser system.                                 |
| CO4 | Analyze the metallurgical aspects of the solidified metals                    |
| CO5 | Understand Inspection, quality control and testing of cast products.          |
| CO6 | Select suitable casting process for given industrial application              |

### 2. <u>Syllabus:</u>

| Introduction  | (03 Hours)  |  |  |  |  |  |  |  |  |
|---|---|--|--|--|--|--|--|--|--|
| Casting as a process of Manufacturing, foundry industry in India, chal<br>industry in India, important industrial sectors using casting   | llenges for foundry   |  |  |  |  |  |  |  |  |
| Moulding Processes, Equipment and Mechanization   | (07 Hours)  |  |  |  |  |  |  |  |  |
| Different types of moulds, moulding materials and moulding processes, pattern and other<br>mould making equipments, forces acting on moulds, mould factors in metal flow<br>moulding factors in casting design, different types of binders and their use in mould and core<br>making  |   |  |  |  |  |  |  |  |  |
| Melting of Metals and Alloys for Casting  | (07 Hours)  |  |  |  |  |  |  |  |  |
| Brief mention of various melting units, melting and post melting trea<br>Charge Calculations, Other Furnaces, Inoculation Practice for Gray<br>Degassing, Ladles, Casting Cleaning melting practices as adopted for<br>alloys such as Al, Cu, steels.   | atments, , Cupola,<br>and Ductile Iron,<br>a few metals and |  |  |  |  |  |  |  |  |
| Solidification of Metals and Alloys   | (09 Hours)  |  |  |  |  |  |  |  |  |
| Nucleation, Growth, Role of alloy constitution, Thermal conditions and inherent nucleation<br>and growth conditions in the liquid melt, Time of solidification and Chowrinov rule,<br>concept of directionality in solidification Significance and practical control of cast<br>structure                                     |   |  |  |  |  |  |  |  |  |
| Principles of Gating and Risering   | (08 Hours)  |  |  |  |  |  |  |  |  |
| Feeding characteristics of alloys, types of gates and risers, time<br>and Chvorinov rule, Wlodawer system for feeder head calculations, gating<br>directionality in solidification, yield of casting and prescription for its aug   | e of solidification<br>ng ratio, concept of<br>gmentation.  |  |  |  |  |  |  |  |  |
| Special Casting Methods   | (06 Hours)  |  |  |  |  |  |  |  |  |
| Shell Moulding, Precision Investment Casting, Permanent Mould Casting, Die Casting, Vacuum Die Casting, Low Pressure Die Casting, Centrifugal Casting, Continuous Casting, Squeeze Casting, Slush Casting, Vacuum Casting, Thixocasting, centrifugal casting, full mould casting, quick casting, evaporative pattern casting. |   |  |  |  |  |  |  |  |  |
| Casting Defects & Quality Control   | (05 Hours)  |  |  |  |  |  |  |  |  |

A detailed analysis of casting defects, their causes and prescription of remedial measures. Non-Destructive Testing (NDT): Dye Penetrant Testing, Fluorescent Powder Testing, Magnetic Particle Inspection, Radiographic Inspection, Ultrasonic Testing, Eddy Current Inspection.

| MEMF116 | : | AUTOMATION IN MANUFACTURING | L | Τ | Р | Credits |
|---------|---|-----------------------------|---|---|---|---------|
|         |   |                             | 3 | 0 | 0 | 03      |

At the end of the course the students will be able to:

| CO1 | Describe importance of automations in manufacturing                            |
|-----|--|
| CO2 | Describe principles of automations and mechatronics in various manufacturing   |
|     | systems  |
| CO3 | Select suitable sensors, mechanism and microprocessor for an automation system |
| CO4 | Explain and select suitable drives and systems for an automation system        |
| CO5 | Design and develop automated systems for manufacturing and material handling   |
| CO6 | Perform basic Programming's related to automation                              |

### 2. Syllabus:

| Introduction   | (03 Hours)                      |  |  |  |  |  |
|--|---------------------------------|--|--|--|--|--|
| Introduction: Importance of automation in the manufacturing industry. U Systems required.  | se of mechatronics.             |  |  |  |  |  |
| Design of Automated system   | (04 Hours)                      |  |  |  |  |  |
| Design of an automated system: Building blocks of an automated system<br>and examples  | n, working principle            |  |  |  |  |  |
| Fabrication  | (06 Hours)                      |  |  |  |  |  |
| Fabrication: Fabrication or selection of various components of system. Specifications of various elements. Use of design data books and            | of an automated<br>l catalogues |  |  |  |  |  |
| Sensors  | (05 Hours)                      |  |  |  |  |  |
| Sensors: study of various sensors required in a typical automated system for manufacturing.<br>Construction and principle of operation of sensors. |                                 |  |  |  |  |  |
| Microprocessor technology  | (05 Hours)                      |  |  |  |  |  |
| Microprocessor Technology: signal conditioning and data accumicroprocessor or micro controllers. Configurations. Working.                          | quisition, use of               |  |  |  |  |  |
| Electrical Drives  | (03 Hours)                      |  |  |  |  |  |
| Electrical drives – types, selection criteria, construction and operating prin   | nciple.                         |  |  |  |  |  |
| Mechanisms   | (04 Hours)                      |  |  |  |  |  |
| Mechanisms: Ball screws, linear motion bearings, cams, systems controlle   | ed by camshafts                 |  |  |  |  |  |
| Hydraulic Systems  | (06 Hours)                      |  |  |  |  |  |
| Hydraulic systems: hydraulic power pack, pumps, valves, designing of hydraulic circuits.   |                                 |  |  |  |  |  |
| Pneumatic Systems  | (04 Hours)                      |  |  |  |  |  |
| Pneumatic systems: configurations, compressors, valves, distribution and   | conditioning                    |  |  |  |  |  |
| CNC Technology   | (05 Hours)                      |  |  |  |  |  |
| CNC technology: basic elements, interpolators and programming.   |                                 |  |  |  |  |  |

| <b>MEMF118</b> | : | COMPOSITES DESIGN AND<br>MANUFACTURING | L | Т | Р | Credits |
|----------------|---|--|---|---|---|---------|
|                |   |  | 3 | 0 | 0 | 03      |

At the end of the course the students will be able to:

| CO1 | Relate the perspectives and applicability of composites over the other class of    |
|-----|--|
|     | materials  |
| CO2 | Identify suitable fibers and reinforcements in composite for identified properties |
| CO3 | Identify suitability of various manufacturing processes for composites             |
| CO4 | Categorize the allied issues of composites   |
| CO5 | Determine the macro-mechanical and micro-mechanical analysis of laminates          |
| CO6 | Elaborate the failure and design criteria for laminates                            |

| Introduction  | (05 Hours)   |  |  |  |  |
|---|--|--|--|--|--|
| Introduction, classification, characteristics of composite materials, basic terminology, properties of constituents and composites, merits and demerits with other class of materials, applications, present statistics, future perspectives, related organizations/associations.   |  |  |  |  |  |
| Fundamentals of various fibers and reinforcements   | (07 Hours)   |  |  |  |  |
| Fiber terminology, glass fibers, aramid fibers, ultra-high molecular weight polyethylene (UHMWPE) fibers, carbon and graphite fibers, woven fabrics, reinforced mats, chopped fibers, prepreg. Polymer-matrix composites, metal-matrix composites, ceramic-matrix composites. Reinforcement forms –short fiber composites, textile composites, hybrid   |  |  |  |  |  |
| Manufacturing processes for composites  | (12 Hours)   |  |  |  |  |
| Classifications, open mold processes, closed mold processes, lay-up processes, vacuum-<br>bag molding, pressure-bag molding, thermal expansion molding, autoclave molding,<br>filament winding, pultrusion, pulforming, automated tape laying, compression molding,<br>resin transfer molding, continuous laminating. Defects in manufacturing of composites, its<br>causes and remedies. Manufacturing issues of small, big and complex components of<br>composites – Case studies |  |  |  |  |  |
| Allied issues of composites   | (06 Hours)   |  |  |  |  |
| Joining of composite materials, machining and cutting of composite<br>composites, material selection guidelines, nondestructive evaluation of<br>interface- statistical distribution of fiber strength, standard mechanical<br>and constituents. Case studies for joining, cutting, recycling and testing of  | sites, recycling of<br>polymer composite,<br>tests for composite<br>of composites. |  |  |  |  |
| Macromechanical and micromechanical analysis of laminates   | (07 Hours)   |  |  |  |  |
| Stress strain relationship for different type of materials, engineering constants for lamina, strength failure theories, hygrothermal stresses and strain. Concept of volume and weight fraction of fiber & matrix, density and void fraction, fiber packing. Evaluation of elastic modulies, ultimate strength of lamina, experimental evaluation using standard test methods, semi empirical models for prediction. Laminate – Code for laminate and                              |  |  |  |  |  |

| Failure analysis and design of laminates (08 Hours)  |  |  |  |  |
|--|--|--|--|--|
| of elastic moduli, coefficient of thermal and moisture expansion for laminate              |  |  |  |  |
| stacking sequence, strength, stiffness and hygrothermal properties of laminate. Evaluation |  |  |  |  |

Failure analysis and design of laminates(08 Hours)Failure criteria for laminate – Design of laminated composite structure and components,<br/>importance of constituents and their selection, stiffened structure, stiffener types, stiffener<br/>design, laminate joints, sandwich composite, environmental effects, inter laminar stresses,<br/>impact resistance, fracture resistance, fatigue resistance

| MEMF120 | : | SURFACE ENGINEERING | L | Т | Р | Credits |
|---------|---|---------------------|---|---|---|---------|
|         |   |                     | 3 | 0 | 0 | 03      |

At the end of the course the students will be able to:

| CO1 | Decide the surface preparation methods suitable for different substrate materials |
|-----|---|
| CO2 | Demonstrate the ability to use the core concepts of engineering application in    |
|     | material degradation by corrosion, wear and its prevention                        |
| CO3 | Describe the importance & role of surface modifications to achieve several        |
|     | technological properties  |
| CO4 | Explain importance of specific coating technique, characterization & its          |
|     | applications on specific engineering components                                   |
| CO5 | Select surface engineering technique for specific wear mechanisms and corrosion   |
|     | control   |
| CO6 | Propose suitable surface engineering technique to control material degradation    |

| Introduction  | (04 Hours)  |  |  |  |
|---|---|--|--|--|
| Introduction to surface engineering, Scope of surface engineering for different engineering materials, Surface Preparation methods such as Chemical, Electrochemical, Mechanical: Sand Blasting, Shot peening, Shot blasting, Hydro-blasting, Vapor Phase Degreasing etc., Coatings: Classification, Properties and applications of Various Coating.                  |   |  |  |  |
| Wear  | (06 Hours)  |  |  |  |
| Adhesive wear, Abrasive and erosive wear, Wear induced by mechan<br>worn surface, Melting wear, fretting wear and diffusive wear, Analytic<br>Wear resistant materials, Fatigue, fracture and creep.  | nical fatigue of the<br>al models of wear,  |  |  |  |
| Corrosion   | (06 Hours)  |  |  |  |
| Corrosion of metals in aqueous media: Electrochemistry and aqueous corrosion,<br>Electrochemical corrosion of machinery and structures, Corrosion inhibitors, Materials<br>factors in aqueous corrosion. Oxidative reactions of metals with oxygen, sulphur and other<br>halogens   |   |  |  |  |
| Discrete Coatings   | (06 Hours)  |  |  |  |
| Introduction, Coatings of organic compounds, Electrochemical coat<br>thermal spraying, plasma-transferred arc the D gun, Vacuum-based<br>Friction surfacing, weld overlays and explosive bonding, Advanced coating  | tings, Plasma and<br>coating methods,<br>ng techniques.   |  |  |  |
| Integral Coatings and Modified Surface Layers   | (09 Hours)  |  |  |  |
| Introduction, Thermally or mechanically modified surface layers: In<br>Laser and electron beam surface hardening, Shot-peening, Thermoche<br>coating: Galvanization and hot-dipping, Carburizing, Carbonit<br>Nitrocarburizing & Boronizing, Advanced surface modification tec<br>Nitriding and Plasma Carburization, Surface alloying by laser and e<br>implantation | duction hardening,<br>emical methods of<br>riding, Nitriding,<br>chnologies: Plasma<br>electron beam, Ion |  |  |  |

| Characterization of Surface Coatings   | (07 Hours)  |  |  |  |
|--|---|--|--|--|
| Introduction, Measurement of surface roughness and coating thickn<br>micro hardness analysis, Adhesively testing, Microstructural eva<br>analysis, Residual stress analysis, Corrosion testing.  | ess, Hardness and<br>luation, Chemical  |  |  |  |
| Control of Materials Degradation (07 Hours)  |   |  |  |  |
| Introduction, Methodology of analysing materials degradation, Selection<br>engineering technology, Control of wear by surface engineering<br>coating selection for wear resistance, Selection of specific surface engineering<br>for specific wear mechanisms, Control of corrosion by surface engineering | n of optimal surface<br>ng, Principles of<br>ineering techniques<br>neering, Control of |  |  |  |

| CO1 | Explain and compute errors in computer programing                                |
|-----|--|
| CO2 | Develop and analyse transcendental and algebraic equations                       |
| CO3 | Apply optimality criterion on given real life problem                            |
| CO4 | Develop regression models using different methods                                |
| CO5 | Solve identified problems through given differential equations                   |
| CO6 | Apply different equations and schemes to solve partial differentiation equations |

| Error Analysis   | (07 Hours)  |  |
|--|---|--|
| Introduction to numerical analysis, Significant figures, round-off, prec<br>approximate and true error, truncation error and Taylor series, mac<br>uncertainties, error propagation, removal of errors in computer programm  | ision and accuracy,<br>chine epsilon, data<br>ning.   |  |
| Transcendental & Algebraic Equations   | (08 Hours)  |  |
| Bracketing & open Methods- Bisection, False Position, Newton- Raphs<br>Method. Gauss Elimination, Gauss Jordon applications, Ga<br>decomposition, Matrix Inversion   | son Method, Secant<br>uss Seidal, LU  |  |
| Single variable optimization   | (08 Hours)  |  |
| Single variable optimization: Optimality Criterion, Bracketing methods - Exhaustive Search<br>Method, Bounding Phase Method, Region Elimination Method - Interval Halving Method,<br>Fibonacci Search Method, Golden Section Search Method, Point Estimation Method -<br>Successive quadratic estimation method, Gradient based methods: - Newton Raphson<br>Method, Bisection Method, Secant Method, Cubic Search Method, Root Finding Method<br>using Optimization Technique |   |  |
| Regression Analysis  | (08 Hours)  |  |
| Least Square Method, Linear Regression, Polynomial Regression, F<br>&Nonlinear Regression. Interpolation- Newton's Forward<br>Interpolation, Newton's Divided Difference Interpolation, Lagrang<br>Gauss's Central Difference Interpolation. Newton Cotes Integration for<br>Simpson, Romberg, Gaussian Quadrature, Numerical Differentiation<br>Method.   | ourier Regression,<br>and backward<br>ge's Interpolation,<br>nulas-Trapezoidal,<br>-Finite Difference |  |
| Solution to Differential Equations   | (07 Hours)  |  |
| Types of Differential equations, Picard's Series Method, Taylor Serie<br>Method, Modified Euler's Method, Runge - Kutta Method, Predictor<br>Milnes Method, and Application to Initial & Boundary value Problems.  | es Method, Euler's<br>Corrector Method,   |  |
| Partial Differentiation Equations  | (07 Hours)  |  |
| Introduction to PDE Elliptic, Parabolic & Hyperbolic Equation. Finite D<br>Forward, Backward, Central Difference, Application to Laplace & P   | ifference Schemes,<br>oisson's Equation,  |  |

Iterative & Relaxation Techniques, Laplacian Operator in Cartesian, polar and other coordinate systems. Solution of Parabolic Equations, Implicit & Explicit Schemes, Crank Nicholson, ADI scheme. Solution of Hyperbolic Equations.

| MEMF134 | MF134 : LOGISTICS AND SUPPLY CHAIN<br>MANAGEMENT | L | Τ | Р  | Credits |
|---------|--|---|---|----|---------|
|         | 3  | 0 | 0 | 03 |         |

At the end of the course the students will be able to:

| CO1 | Understand the elements and functions of supply chain, role of drivers and demand          |
|-----|--|
|     | forecasting  |
| CO2 | Describe the increasing significance of logistics and its impact on both costs and service |
| CO3 | Build strategic framework to analyse supply chain of selected industries                   |
| CO4 | Apply various techniques for managing inventory and transport network for selected         |
|     | situations   |
| CO5 | Apply suitable pricing and revenue management using information technology tools           |
| CO6 | Develop criteria to achieve improved performance by integrating and optimizing the         |
|     | logistics and supply-chain process   |

#### 2. Syllabus:

| Logistics and Supply Chain Management   | (04 Hours)          |  |  |  |  |  |
|---|---------------------|--|--|--|--|--|
| Logistics Management-An Introduction, Key actors, Classificati<br>Applications, Total logistics cost, Logistics to supply chain Management  | on of Logistics     |  |  |  |  |  |
| Building a Strategic Framework to Analyze Supply Chains   | ( <b>06 Hours</b> ) |  |  |  |  |  |
| Historical evolution of supply chain, Understanding the supply chain, supply chain performance: achieving strategic fit, supply chain drivers and metrics and case studies.                       |                     |  |  |  |  |  |
| Designing the Supply Chain Network  | (07 Hours)          |  |  |  |  |  |
| Designing distribution networks and applications to e-business, network design in the supply chain, network design in an uncertain environment, and case studies                                  |                     |  |  |  |  |  |
| Planning Demand and Supply in a Supply Chain  | (07 Hours)          |  |  |  |  |  |
| Demand forecasting strategy in a supply chain, aggregate planning in a supply chain, sales<br>and operation planning: Planning supply and demand in a supply chain, and case studies              |                     |  |  |  |  |  |
| Planning and Managing Inventories in a Supply Chain   | (08 Hours)          |  |  |  |  |  |
| Managing economies of scale in a supply chain: cycle inventory, managing uncertainty in a supply chain: safety inventory, determining the optimal level of product availability, and case studies |                     |  |  |  |  |  |
| Designing and Planning Transportation Networks  | (05 Hours)          |  |  |  |  |  |
| Transportation strategy in a Supply Chain and case studies  |                     |  |  |  |  |  |
| Managing Cross-Functional Drivers in a Supply Chain   | (08 Hours)          |  |  |  |  |  |
| Sourcing decisions in a supply chain, pricing and revenue management in a supply chain, information technology in a supply chain, coordination in a supply chain, and case studies                |                     |  |  |  |  |  |

| MEMF136 | : | MICRO AND NANO MANUFACTURING | L | Τ | Р | Credits |
|---------|---|------------------------------|---|---|---|---------|
|         |   |                              | 3 | 0 | 0 | 03      |

At the end of the course the students will be able to:

| CO1 | Classify and describe micro and nano manufacturing processes based on           |
|-----|---|
|     | applications  |
| CO2 | Explain and select suitable micro machining/ micro forming/ MEMS processes      |
|     | based on given parameters and constraints                                       |
| CO3 | Explain and select suitable MEMS/NEMS technique for identified application.     |
| CO4 | Distinguish between the requirements for micro and nano manufacturing processes |
| CO5 | Recommend a suitable nano- manufacturing process for a given application.       |
| CO6 | Propose suitable metrological technique for measuring micro and nano features.  |

| Introduction  | (03 Hours)  |  |  |  |  |
|---|---|--|--|--|--|
| Introduction to miniaturization and its needs, scaling laws, mid<br>design considerations, classification, selection of micro machining proce   | cro products and sses, applications                           |  |  |  |  |
| Micro Machining Processes   | (14 Hours)  |  |  |  |  |
| Evolution and Principle of micromachining, micro turning, micro millin<br>ultrasonic micro machining, abrasive jet micro machining, micro<br>machining, micro electro chemical machining, laser micro machining   | g, micro grinding,<br>electro discharge                       |  |  |  |  |
| Micro Forming Processes   | (09 Hours)  |  |  |  |  |
| Micro scale plastic deformation, size effect, micro deep drawing, mic punching, micro blanking, micro fabrication using bulk metallic gla defects.  | ro extrusion, micro<br>sses, flow induced                     |  |  |  |  |
| MEMS and NEMS Techniques  | (07 Hours)  |  |  |  |  |
| Classification, principle and working, photo lithography, chemical etching  | g, LIGA, materials  |  |  |  |  |
| Introduction to Nano Manufacturing  | ( <b>08 Hours</b> )   |  |  |  |  |
| Transition from nano technology to nano manufacturing; diamond turn machining; nano joining, nano soldering, nano welding, mechanical bonding, fastening; chemical vapor deposition, scanning tunnelling microscopy, nano lithography                       |   |  |  |  |  |
| Abrasive Based Nano Finishing Processes   | (04 Hours)  |  |  |  |  |
| Abrasive flow finishing, chemo-mechanical polishing, magnetic a<br>magnetorheological finishing, magnetorheological abrasive flow fi<br>float polishing, hybrid nanofinishing: chemo-mechanical m<br>finishing, electrochemical magnetic abrasive finishing | brasive finishing,<br>nishing, magnetic<br>nagnetorheological |  |  |  |  |

|--|--|--|--|--|
| Role of experimentation in rapid scientific progress, Historica  | l perspective of   |  |  |  |
| experimental approaches, Steps in experimentation, Principles of experimentation   |  |  |  |  |
| Fundamentals of Design of Experiments  | (06 Hours)   |  |  |  |
| Basic principles – randomization, replication, blocking, degree of freedom, confounding, selection of quality characteristics, Signal to Noise ratio   |  |  |  |  |
| Simple Comparative Experiments   | ( <b>07</b> Hours)   |  |  |  |
| Basic concepts of probability and statistics, Comparison of two means and two variances,   |  |  |  |  |
| Comparison of multiple (more than two) means & ANOVA; understanding main effect  |  |  |  |  |
| and interaction effect   |  |  |  |  |
|  |  |  |  |  |
| Experimental Designs   | (07 Hours)   |  |  |  |
| <b>Experimental Designs</b><br>Practical methodology for DoE, Factorial designs, fractional factorial de | ( <b>07 Hours</b> )<br>lesigns, orthogonal   |  |  |  |
| <b>Experimental Designs</b><br>Practical methodology for DoE, Factorial designs, fractional factorial designs, standard orthogonal arrays & interaction tables, modifying the  | (07 Hours)<br>lesigns, orthogonal<br>orthogonal arrays,  |  |  |  |
| <b>Experimental Designs</b><br>Practical methodology for DoE, Factorial designs, fractional factorial of arrays, standard orthogonal arrays & interaction tables, modifying the selection of suitable orthogonal array design, analysis of experimental data   | (07 Hours)<br>designs, orthogonal<br>orthogonal arrays,<br>ita   |  |  |  |
| <b>Experimental Designs</b><br>Practical methodology for DoE, Factorial designs, fractional factorial of arrays, standard orthogonal arrays & interaction tables, modifying the selection of suitable orthogonal array design, analysis of experimental da <b>Response Surface Methodology</b>   | (07 Hours)<br>lesigns, orthogonal<br>orthogonal arrays,<br>tta<br>(10 Hours)                                       |  |  |  |
| Experimental Designs<br>Practical methodology for DoE, Factorial designs, fractional factorial designs, standard orthogonal arrays & interaction tables, modifying the selection of suitable orthogonal array design, analysis of experimental dates in the selection of suitable orthogonal array design, analysis of experimental dates in the selection of suitable orthogonal array design, analysis of experimental dates in the selection of suitable orthogonal array design, analysis of experimental dates in the selection of suitable orthogonal array design, analysis of experimental dates in the selection of suitable orthogonal array design, analysis of experimental dates in the selection of suitable orthogonal array design, analysis of experimental dates in the selection of suitable orthogonal array design, analysis of experimental dates in the selection of suitable orthogonal array design, analysis of experimental dates in the selection of suitable orthogonal array design, analysis of experimental dates in the selection of suitable orthogonal array design, analysis of experimental dates in the selection of suitable orthogonal array design, analysis of experimental dates in the selection of suitable orthogonal array design and selection of suitable orthogonal array design and selection of selection of suitable orthogonal array design analysis of experimental dates in the selection of s       | (07 Hours)<br>lesigns, orthogonal<br>orthogonal arrays,<br>ita<br>(10 Hours)                                       |  |  |  |
| Experimental Designs Practical methodology for DoE, Factorial designs, fractional factorial of arrays, standard orthogonal arrays & interaction tables, modifying the selection of suitable orthogonal array design, analysis of experimental da Response Surface Methodology Concept, linear model, steepest ascent, second order model, regression Taguchi's Parameter Design  | (07 Hours)<br>lesigns, orthogonal<br>orthogonal arrays,<br>ita<br>(10 Hours)<br>(10 Hours)                         |  |  |  |
| Experimental Designs Practical methodology for DoE, Factorial designs, fractional factorial of arrays, standard orthogonal arrays & interaction tables, modifying the selection of suitable orthogonal array design, analysis of experimental da Response Surface Methodology Concept, linear model, steepest ascent, second order model, regression Taguchi's Parameter Design Concept of robustness, noise factors, objective function & S/N ratios, interaction arrays in the selection of suitable selectors.  | (07 Hours)<br>lesigns, orthogonal<br>orthogonal arrays,<br>ita<br>(10 Hours)<br>(10 Hours)<br>ner-array and outer- |  |  |  |
| Experimental Designs Practical methodology for DoE, Factorial designs, fractional factorial of arrays, standard orthogonal arrays & interaction tables, modifying the selection of suitable orthogonal array design, analysis of experimental da Response Surface Methodology Concept, linear model, steepest ascent, second order model, regression Taguchi's Parameter Design Concept of robustness, noise factors, objective function & S/N ratios, inf array design, data analysis   | (07 Hours)<br>designs, orthogonal<br>orthogonal arrays,<br>tta<br>(10 Hours)<br>(10 Hours)<br>ner-array and outer- |  |  |  |
